Fulfilment centre operations

- Remove Fulfilment centres SaaS

Remove Fulfilment centres SaaS

Remove Fulfilment centre operation is complementary to the remove shop operation as remove shop does not remove fulfilment centre or inventory. The reason for this is that fulfilment centre could be shared by multiple shops and in terms of the platform is seen a distinct entity separate to the shop.

This feature allows to remove fulfilment centre and associated inventory records, with the following options:

- **Remove only inventory (keep fulfilment centre)** - if enabled the fulfilment centre is not removed but only inventory records are removed. This is useful in case inventory records got misaligned by the daily auto-imports and shop owner would like to ensure that only the latest fresh import data is in the platform.
