Contact information

The community

YC core team are dedicated professionals with vast experience in eCommerce and software development in general. But we always welcome a helping hand and are very keen on expanding our community and making YC a true success. At the moment a number of companies are actively using YC so we are very excited to hear about these projects. YC has a comprehensive [user guide](#) and we just created a Google [group](#) for discussions around implementations, challenges and new features.

C.1

Our services

We offer a wide range of services to our clients including (but not limited to):

- Consultations - providing detailed information on how to use YesCart, its features and performance
- Architectural design - giving detailed description of how to implement certain features
- Implementation services - anything from altering functionality, adding new themes to your shop, third party systems integrations to full implementation of your project
- Environment configuration - full configuration of your production environment according to your business needs
- Support services - for piece of mind when your e-commerce system is up and running

To find more about what we can do for your business contact us using our [feedback form](#).

## Annotations

Element	Template	Configurations <sup>1</sup>	Content include <sup>2</sup>	Description
---------	----------	-----------------------------	------------------------------	-------------

C.1 Contacts page body			"contacts_content_include"	Content include
C.2 Contacts us form				Allows to send <a href="#">emails</a> via "adm-contactform-request" template to shop admin
F.1 Footer	Standard footer			This component is described in <a href="#">Home page</a> documentation
H.1 Header	Standard header			This component is described in <a href="#">Home page</a> documentation
M.1 Breadcrumbs	Breadcrumbs			Automatically resolves current breadcrumbs path depending on the URI

its position, for content with sub categories its menu is displayed.

<sup>1</sup>Configurations refer to [shop](#) and [category](#) custom attributes that define behaviour of components

<sup>2</sup>[Content](#) include refers to shop URI suffix for content. For example if shop has code "SHOP10" and content include is specified as "custom\_content" then URI of the content include that will be rendered is "SHOP10\_custom\_content"
